MOBILE PRODUCT STORY

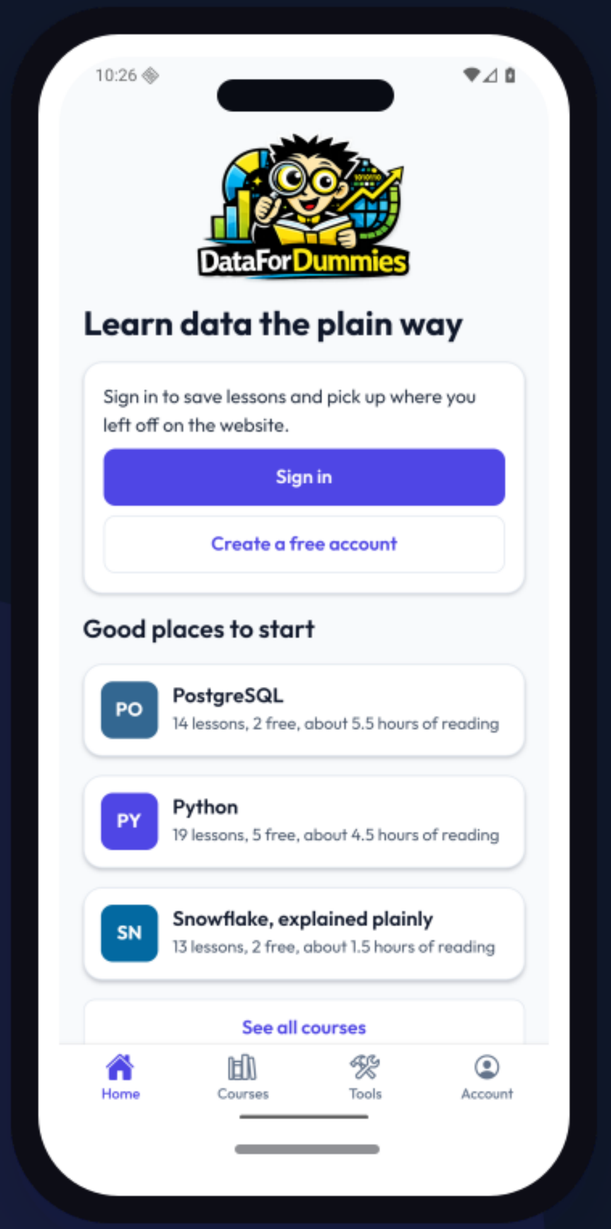

Data skills. Explained plainly.

A calm, focused mobile learning companion for people who want practical data skills without the jargon.

ANDROID + iOS

in.datafordummies.app

Product approval presentation • October 2026

WHY THIS PRODUCT

Learning data should feel achievable

The app turns a broad, intimidating subject into a clear next step—on the device learners already carry.

01

Start without friction

Browse the course catalogue and free lessons before committing.

02

Learn at your pace

Read focused lessons, use practical tools, and continue where you stopped.

03

See real progress

Saved completion, course progress, and certificates make momentum visible.

EVERY USER POINT OF VIEW

One product, four learner moments

The experience adapts to intent—from a curious visitor to a committed Pro learner managing their account.

G

Guest explorer

“Show me whether this is for me.”

Catalogue, course detail, lesson previews and free learning paths.

L

Signed-in learner

“Help me keep going.”

Saved progress, continue-learning cues and account-aware navigation.

P

Existing Pro learner

“Give me my full access.”

Entitlement-aware lessons, tools and certificate access.

A

Account owner

“Keep my data under control.”

Settings, password reset, privacy links, sign-out and deletion.

END-TO-END EXPERIENCE

From curiosity to a completed course

Every step is explicit, recoverable and designed for small-screen focus.

1. **Discover** — Browse courses
2. **Join** — Create or sign in
3. **Learn** — Read lessons
4. **Practise** — Use tools
5. **Progress** — Resume and complete
6. **Prove** — View certificates

A WEB LEARNER CAN CONTINUE IN THE APP WITH THE SAME ACCOUNT

LEARNER EXPERIENCE

Everything needed to learn—nothing noisy

The information architecture stays familiar: Home, Courses, Tools and Account are always one tap away.

⌂ Home and discovery

- Recommended starting points
- Course catalogue and details
- Free lesson visibility

→ Learning continuity

- Continue where you stopped
- Lesson completion state
- Course-level progress

T Practical tools

- Purpose-built data utilities
- Hardened in-app tool pages
- Safe external-link handling

★ Recognition

- Certificate catalogue
- Entitlement-aware access
- Account-linked history

IDENTITY AND ACCOUNT

A complete account lifecycle

People can enter, recover, understand and leave the service without getting trapped.

Authentication

- Sign in and create account
- Email-code verification
- Session-aware navigation

Recovery

- Forgot-password entry
- Reset-code workflow
- Clear error and success states

Settings

- Account overview
- Privacy and legal links
- Sign out on demand

Deletion

- In-app deletion request
- Confirmation before action
- Visible policy destination

TRUST BY DESIGN

The app protects the learner’s context

Native boundaries are strict where identity and navigation matter most; web content is admitted only on purpose.

S Secure sessions

- Tokens stored in secure device storage
- Session refresh and expiry handling
- Sensitive state cleared on sign out

W Hardened WebView

- Allowlisted lesson and tool routes
- Unexpected navigation is blocked
- External URLs open outside the app

P Privacy controls

- No invented social or tracking claims
- Account deletion available
- Legal pages remain reachable

A Accessible interaction

- Readable contrast and type scale
- Touch-friendly controls
- Predictable bottom navigation

MOBILE ARCHITECTURE

Native where it matters. Reuse where it helps.

A React Native shell delivers app-grade identity, navigation and state while selected long-form content remains safely reusable.

Android + iOS

One React Native app with platform-specific packaging, icons and release settings.

Native product shell

Authentication, Home, Courses, Progress, Certificates, Tools and Account.

Controlled web content

Existing lesson and tool routes inside an allowlisted, hardened WebView.

Existing backend

The same account, content, entitlement and progress services.

NATIVE: IDENTITY + NAVIGATION + STATE

WEBVIEW: SELECTED LESSONS + TOOLS

GUARDRAILS: ALLOWLIST + EXTERNAL BROWSER

QUALITY EVIDENCE

Release confidence is earned, not claimed

The product has passed repeatable engineering checks while keeping platform limitations explicit.

iOS JavaScript export

0
known release-blocking app defects

- ✓ Release APK built and installed
- ✓ Type, lint and automated tests passed
- ✓ Critical mobile flows exercised
- ✓ Architecture and release runbooks included

STORE READINESS

Technically ready for the owner’s store steps

This is an approval-ready product build—not a claim that Apple or Google has already reviewed it.

READY NOW

- ✓ Branded icon, launch experience and app identity
- ✓ Android release build and device verification
- ✓ iOS export verification and native project
- ✓ Privacy, account deletion and legal entry points
- ✓ Architecture, testing and release documentation

BEFORE PUBLIC LISTING

1. Provide Apple signing and App Store Connect access
2. Provide Google Play Console access and signing
3. Run full iOS build on Xcode with credentials
4. Complete store privacy and content questionnaires
5. Capture final store screenshots and submit

WHAT APPROVAL UNLOCKS

A credible mobile extension of the learning brand

The app is valuable on its own and strategically useful to the wider product.

R

Retention

A persistent home for continuing lessons and seeing progress.

T

Trust

A focused branded experience with explicit security and privacy boundaries.

G

Growth

A store presence that can turn discovery into an owned learner relationship.

APPROVAL DECISION

Approve the path to store submission

The experience is coherent, branded and technically verified. The remaining work is owner-controlled store access, signing and final listing operations.

01

Approve the product experience

02

Release store credentials and assets

03

Run final signed builds and submit
